

## Oxygen Software: Mobile Forensic Secrets and Best Wishes for 2012

Oxygen Software Company wishes a wonderful holiday and a happy New Year 2012 to all its customers, gives away free Oxygen Forensic Suite licenses and reveals the plans for Oxygen Forensic Suite 2012 features.

Oxygen Software Company is glad to send Christmas and New Year greetings to all customers. The year of 2011 brought many changes in mobile forensics. The market completely turned to the world of smartphones changing phone forensics accordingly. It became possible to do a lot of forensically useful investigations not available before - like acquiring physical images of Android devices and analyzing user data in phone applications. Oxygen Software is proud to be on the top of these changes and to provide the most appropriate forensic solution to its customers.

"We wish all our customers the nicest holiday season and efficient year of 2012 and welcome them and new customers to share the success of Oxygen Forensic Suite with us. We have a lot of features to show you the next year", says Nickolay Golubev, marketing communications manager. "Don't forget about Oxygen Forensic Suite Giveaway offer. There are only several days left before the opportunity expires."

### What to expect from Oxygen Forensic Suite in 2012?

Oxygen Software aims to give experts the best tool for mobile forensics. This applies not only to the data available for extraction or the number of covered models but also for the analytic tools in Oxygen Forensic Suite. The new Communication Statistics section provides a convenient tool to explore connections between device owners and their contacts by analyzing calls, messages and Skype. The next step will be the ability to determine the nearest circle of multiple phone users and revealing popular contacts, even these which devices are not under investigation at the moment. Such tools will help investigators automatically determine relationships that require a certain amount time to be discovered manually. Visual graphs intend to improve the stats comprehension as well.

Following the trend of smartphone market share growth Oxygen Forensic Suite covers the new devices promptly. These will be smartphones based on Android, iOS, Bada and other widely used operational systems. But we don't forget about plain cell phones market popular in certain regions. Oxygen Forensic Suite users will be able to analyze even more of them including Chinese devices on MTK chipset.

Many new applications data will be available for in-depth analysis. And, of course, long-awaited export and printing functions will appear in Applications section.

"And, perhaps, the most significant feature to expect from Oxygen Software in 2012 is well-known to all our active customers. This feature is the one that you (yes, we mean YOU) want to see in Oxygen Forensic Suite. You can influence the progress of the product and suggest the features that will help you the best in your regular work. We're always open to this feedback and ready to implement it for you", says Nickolay Golubev, marketing communications manager. "Contact us via Facebook page or Twitter channel and be the first who learns about the newest features and receives unique offers."

### About Oxygen Forensic Suite

Oxygen Forensic Suite helps investigators and forensic specialists access and analyze data from a variety of mobile devices such as cell phones, smartphones, communicators, PDA and tablet PCs. Currently supporting more than 2,500 different models, Oxygen Forensic Suite covers the widest range of mobile devices compared to competition, and allows fully automated acquisition and analysis of supported devices.

The unique Timeline feature offers convenient, single-place access to all activities and movements performed by the user arranged by date and time. Investigators can track user location at every moment, build and map their historic routes, and clearly see all activities performed by the user at each location.

Another signature feature of Oxygen Forensic Suite allows investigators performing a global search on all devices ever analyzed with the toolkit. The global search quickly reveals any connections (e.g. common contacts, exchanged calls, texts or emails) between the phone owners.
