

## EXPORT TO RELATIVITY FORMAT

### About Relativity software

Relativity is a cloud-based eDiscovery software that offers case assessment, fact management, review, production, analytics and legal hold functionalities within a suite. It is widely used by corporations, governments and law firms.

### Export to Relativity format in Oxygen Forensic® JetEngine

Oxygen Forensic® Detective allows investigators to export extracted data in a format compatible with Relativity software. This feature is available in the Oxygen Forensic® JetEngine module that is built into our flagship Oxygen Forensic® Detective software.

The unique Export window opens by clicking a special double square icon found on the JetEngine Device Desktop. Exporting to the Relativity format is also added within the Export menu in all the sections that we currently support this feature.

Currently the sections available to export to Relativity include contacts, calls, messages, and files.

Now users of Oxygen Forensic® Detective can extract data from mobile devices, import images and backups and then easily export into a formatted file to enjoy analyzing the acquired data within Relativity, teaming up in their investigations.

Looking to add this feature to your
