

# Oxygen Forensic® DETECTIVE

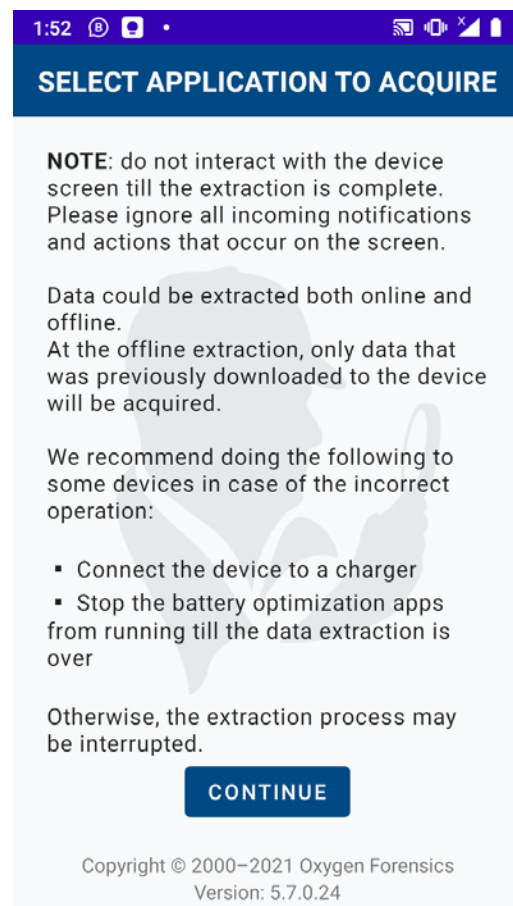

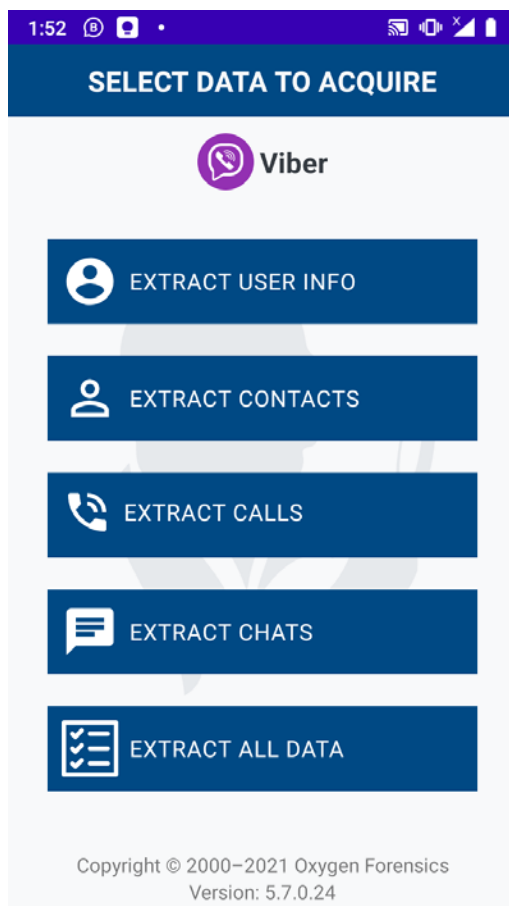

version 13.7

JULY 2021

## Viber Extraction via OxyAgent

### MOBILE FORENSICS

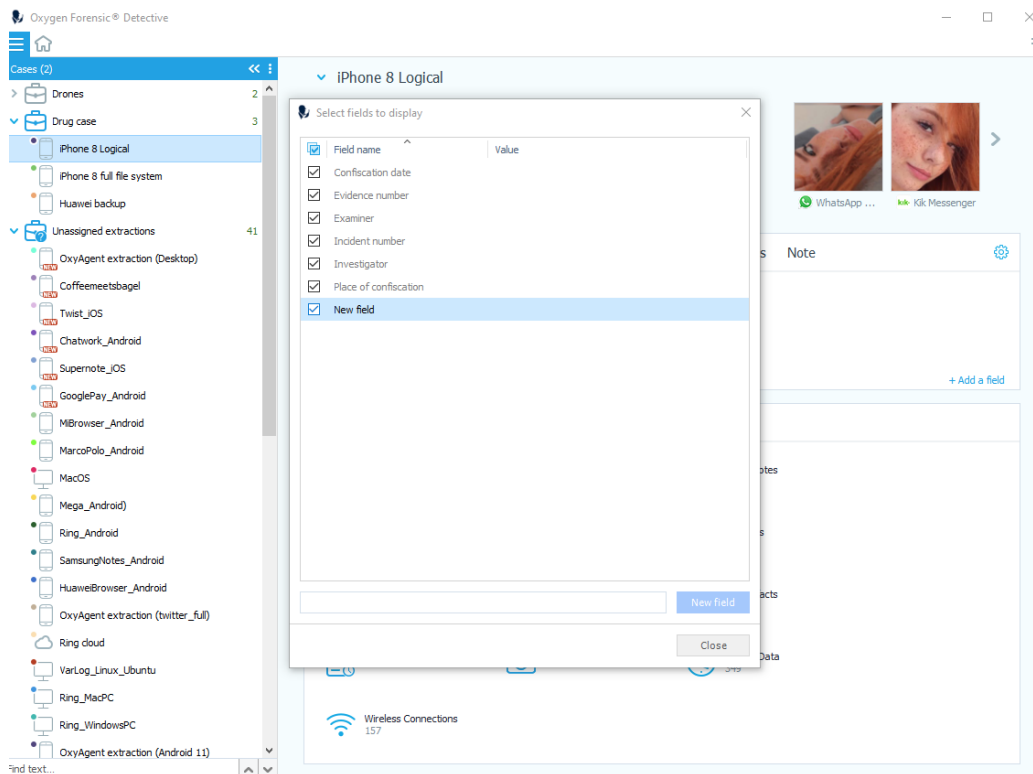

Oxygen Forensic® Detective v.13.7 introduces a new extraction method for Viber. Now, Viber user data can be collected from any unlocked Android device using OxyAgent. Install it on a device, select the Viber artifacts that need to be collected, and once the extraction is done, import it into Oxygen Forensic® Detective. The evidence set will include account info, contacts, chats, and calls. Please note that our software also collects Viber data from computers and the cloud.

# Device and Case Descriptions

## GENERAL

We've added the ability to add custom fields for device and case descriptions. Click the "Add a field" button on the General Info tab in the Device or Case Information window to create new fields or hide/display existing ones.

# KeyScout Enhancements

## COMPUTER ARTIFACTS

The following updates have been implemented to our KeyScout utility:

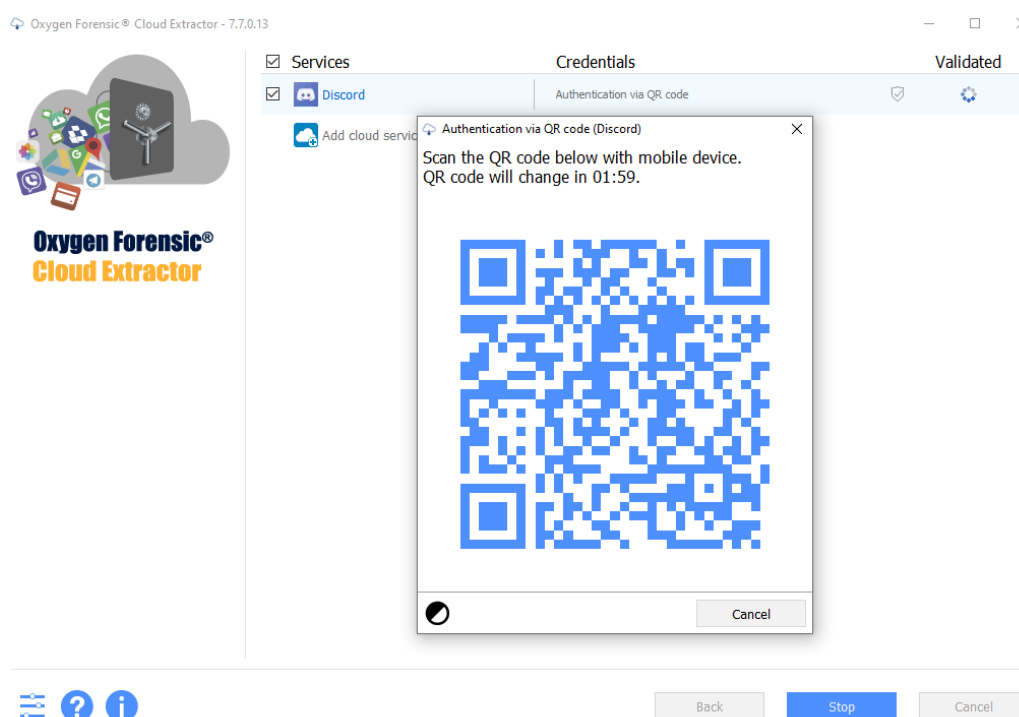

- Our software now supports Deflate64 format, enabling the import of images created by the KAPE (Kroll Artifact Parser and Extractor) utility.
- Added ability to extract passwords saved in Microsoft Edge.
- Updated support for Telegram Desktop on Windows, macOS, and Linux.
- Improved the parsing of Jump Lists and extraction of LNK files.
- New options and tabs are added to the KeyScout Options menu.

# Cloud Extractor Enhancements

## CLOUD FORENSICS

We've made several enhancements to the Oxygen Forensic® Cloud Extractor. Investigators will now be able to:

- Extract Discord data via login credentials and token as well as by scanning a QR code from a mobile app. Artifacts will include account info, contacts, private and group chats and channels
- Extract iCloud backups made from Apple iOS 15 beta devices using login credentials.
- We've also improved support for WhatsApp Google Backups and the WhatsApp QR code method, as well as decryption of WhatsApp backups in crypt14 format.

## New App Support

### MOBILE FORENSICS

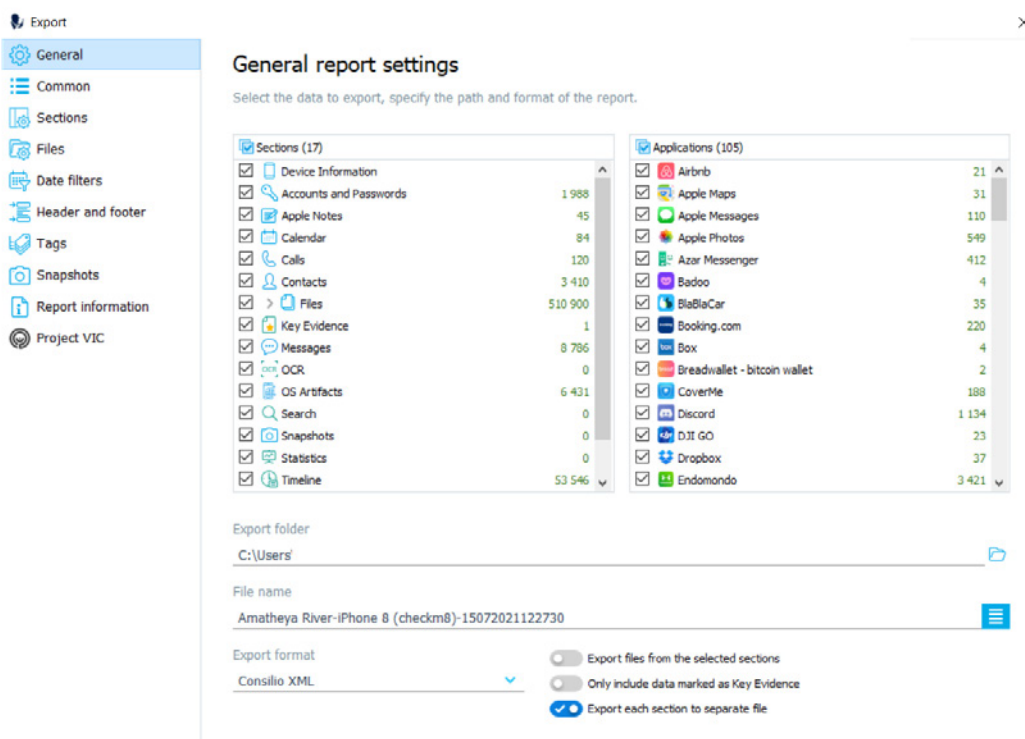

Oxygen Forensic® Detective v.13.7 introduces support for 5 new apps and updates data parsing for 700+ app versions. Our new apps include Google Pay, SuperNote, Twist, Chatwork, and the dating app, Coffee Meets Bagel.

# Export Enhancements

## GENERAL

We've made several enhancements to our export process, allowing investigators to:

- Export extracted evidence to Consilio XML format. Exported datasets include contacts, calls, messages and general information about extraction. \*This comes with a Load File Export license.
- Export identified face sets to popular file formats while in the Search section.
- Export data from the Faces section in XML format.

## Resolved issues

- Fixed the issue with decryption keys incorrect extraction from Huawei Mate 20 Pro device.
- Fixed the issue with Line extraction via OxyAgent.
- UFED checkm8 extraction packed in ZIP format.
- Duplicates in the WebKit data section.
- Facebook private chats were not extracted in the Cloud Extractor.
- Authentication within WhatsApp Google backup in the Cloud Extractor.
- WhatsApp and Google Mail messages exporting to EML format.
- Fixed the issue with adding custom fields in the Export settings.
