

## Oxygen Forensics Adds Nearly 20 New Features to Launch Oxygen Forensic Detective X

*New Cloud Service Capabilities Added for Mi Cloud, Samsung Cloud, Facebook's Workplace, & iTunes*

Alexandria, VA – November 30, 2017 — [Oxygen Forensics](http://www.oxygen-forensic.com), a worldwide developer and provider of advanced forensic data examination tools for mobile devices, drones and cloud services, today announced that it has added almost 20 new features in its flagship product Oxygen Forensic® Detective X (version 10). Among the features, Oxygen has made its industry-leading Oxygen Forensic® Cloud Extractor even faster by using 64-bit database processing power that speeds up the entire data extraction process.

Oxygen Forensic Detective X enhances investigation abilities for forensic experts with the addition of these uniquely supported cloud services:

- **Mi Cloud** - Xiaomi phones are growing in popularity. The Oxygen Forensic Cloud Extractor offers the industry-first ability to extract all available information from Mi Cloud via login/password or token including contacts, calls, messages, calendar and other personal data.
- **Samsung Cloud backup** - Forensic experts can import and parse complete Samsung Cloud backups that can be accessed via login/password or token. Backups may contain contacts, calls, messages, calendars, files and Wi-Fi history.
- **Samsung Cloud Gallery** – Added the ability to extract live, trashed and deleted photos, videos and documents from Samsung Cloud. This data also contains geographical locations so experts can track the whereabouts of the Samsung device owner.

As announced earlier this month, [Oxygen Forensic Detective X also includes enhanced WhatsApp data extraction](#) including WhatsApp backup decryption with 2-step verification and data extraction from the WhatsApp server.

Other additions to Oxygen Forensic Detective X include unsupported apps parsing, drone support enhancements, selected physical extraction, screen lock bypass for Motorola devices, Huawei backups import ability (Detective X can find passwords for encrypted backups with the help of a built-in Password module), predefined keyword list and an improved SQL editor. For an advanced explanation of all new features, please visit the [Oxygen Forensic Detective X](#) product page.

“We have been very excited to tell our customers and the world about all of the new additions to Oxygen Forensic Detective X,” said Lee Reiber, COO, Oxygen Forensics, Inc. “With our new cloud services additions, [Oxygen now supports many cloud services](#), and we continue to lead the competition with two industry-first WhatsApp extraction capabilities. Our ability to keep providing new product improvements every single month speaks to the strength and determination of our entire product team as we help government, law enforcement and corporate forensics experts.”
