

Oxygen Forensics Enjoys Double-Digit Growth in 2017

Growth causes office space at world headquarters in Alexandria, VA to triple in size

Alexandria, VA – Dec. 19, 2017 — [Oxygen Forensics](http://www.oxygen-forensic.com), a worldwide developer and provider of advanced forensic data examination tools for mobile devices, drones and cloud services, today announced that it has seen double-digit growth in 2017 as it worked to increase its customer base with new customer additions in law enforcement, government and corporate spaces. Due to its growth, Oxygen relocated its headquarters in Alexandria, VA, and tripled the size of the office.

Oxygen has seen double-digit to triple-digit growth year over year since 2013. This past year the company focused on strategic expansion that produced an exceptional growth-to-revenue ratio that positioned Oxygen Forensics well for the future. Due to the historic growth over the past four years, Oxygen needed to move its headquarters to a larger space to add a classroom, forensics lab and more sales and technical support space for the growing staff.

“I am very excited for our corporate growth which led to the expansion of our training facilities worldwide, additional new certified trainer partnerships, and the increase of our valued resellers and distributors to better support our growing customer base,” said Lee Reiber, COO, Oxygen Forensics, Inc.

“The reason I joined Oxygen was because of the tremendous growth potential in the digital forensics market,” said Tim O’Rourke, VP of Sales, Oxygen Forensics, Inc. “Oxygen not only has a product that is an industry leader, but also a team of people that cares deeply for our customers and for those people that our products and our customers assist.”

About Oxygen Forensics, Inc.

Headquartered in Alexandria, Virginia, Oxygen Forensics was founded as a PC-to-Mobile Communication software company. This experience has led the team of mobile device experts to become unmatched in understanding mobile device communication protocols. With this knowledge, the company has built innovative techniques into Oxygen Forensic® Detective allowing forensic examiners to access much more critical information than competing forensic analysis tools. Oxygen Forensics delivers the most advanced forensic data examination tools for mobile devices, cloud services, and drones covering the widest range of mobile devices running iOS, Android, Windows Phone, BlackBerry and many others.
